Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Landing gear torn off, engine compartment bent downward and crumpled on right side, prop bent, baggage compartment bulkhead detached and thrown forward. slight crumpling of left side of empennage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On April 28, 2025, at approximately 1:15 PM Pacific Daylight Time (PDT), a personal flight was being conducted under VFR from Reno-Tahoe International Airport (KRNO) to return to the home airport Bend Municipal Airport (KBDN), with a planned fuel stop at Lakeview County Airport (KLKV), Oregon. The aircraft involved was a Piper Cherokee 140, with two persons onboard: the pilot in command (PIC) and one passenger.

Upon arrival at KLKV, the sky was clear and wind conditions were assessed visually using the windsock, which showed extended displacement from the north. The wind was estimated at approximately 15 knots. A straight-in approach to the active runway 35 was made with no flaps deployed due to the observed wind conditions. The aircraft touched down just before the 1,000-foot runway marker.

Immediately after touchdown, the aircraft veered to the right. Braking and left rudder inputs were applied; however, the aircraft exhibited instability. Corrective inputs were momentarily released, and the aircraft continued to veer off the runway heading, estimated at 25 to 30 degrees from centerline. A go-around was initiated. The aircraft briefly became airborne, reaching an estimated altitude of 5 to 10 feet AGL, before a stall warning was annunciated. The pilot reduced back pressure, and the aircraft touched down off the runway surface.

Braking was insufficient to prevent the aircraft from impact after touching down. The aircraft crossed the west bank of an agricultural ditch at an estimated 30 to 40-degree angle and impacted the far bank. The aircraft came to rest shortly after deflecting to the left of the point of impact. The airframe sustained damage during the off-runway excursion.

Injuries:

Pilot in Command (PIC): Sustained a fractured right wrist, lacerations and abrasions on the right hand and left arm, neck abrasions and a fractured sternum from seatbelt restraints, abrasions on the left knee, and a sprained right ankle.

Passenger: Sustained a fractured right wrist, mild concussion, lacerations on both shins, and severe bruising across the waist and chest consistent with seatbelt restraint forces.

There were no fatalities. Emergency services responded to the scene and both occupants received medical attention following the accident.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
