

NATIONAL TRANSPORTATION SAFETY BOARD

NTSB Form 6120.1

PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

Email the pilot/operator aircraft accident/incident report to the investigator-in-charge of your accident/incident. If email is not available, mail the report per the instructions below.

If your accident/incident occurred in Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Mississippi, Alabama, Georgia, Florida, the District of Columbia, Puerto Rico, or the US Virgin Islands, send the form to: NTSB, ERA, 45065 Riverside Parkway, Ashburn, VA 20147.

If your accident/incident occurred in Ohio, Michigan, Indiana, Wisconsin, Illinois, Minnesota, Iowa, Missouri, Arkansas, Louisiana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Colorado, or New Mexico, send the form to: NTSB, CEN, 4760 Oakland Street, Suite 500, Denver, CO 80239.

If your accident/incident occurred in Montana, Wyoming, Idaho, Utah, Arizona, Nevada, Washington, Oregon, California, Hawaii, or the territories of Guam or American Samoa, send the form to: NTSB, WPR, 505 South 336th Street, Suite 540, Federal Way, WA 98003.

If your accident/incident occurred in Alaska, send the form to: NTSB, ANC, 222 West 7th Avenue, Room 216, Box 11, Anchorage, AK 99513.

Rules pertaining to notification of aircraft accidents and incidents, as well as overdue aircraft are found in 49 Code of Federal Regulations (CFR) Part 830 http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&tpl=/ecfrbrowse/Title49/49cfr830_main_02.tpl. These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

INSTRUCTIONS TO PILOTS/OPERATORS FOR COMPLETING THIS FORM

It is necessary that ALL questions on this report be answered completely and accurately.

If more space is needed, continue on a blank sheet of paper.

Nearest City/Place: Use the name of the nearest community in the state where the accident/incident occurred.

Date/Time: Indicate the date and local time of the event. Be sure to indicate the time zone.

Phase of Operation: Indicate the phase of operation during which the accident/incident occurred.

Aircraft Information: Enter aircraft make and model information as indicated on the aircraft registration certificate, including series. If the involved aircraft is certified as "amateur-built," include the name of the producer of the kit or plans, unless an NTSB employee instructs otherwise.

Maximum Gross Weight: Enter the certificated maximum gross weight for the aircraft involved in the occurrence. This should be the same as the maximum gross weight indicated on the aircraft weight and balance documents.

Engine: Enter engine make and model information as indicated on the engine data plate.

The NTSB uses this form for aircraft accident prevention activities and for statistical purposes. NTSB regulations (49 CFR Part 830) require that **ALL** questions be answered completely and accurately. Completion of this form will take approximately 60 minutes. The NTSB does not guarantee the privacy of any information provided in this form. You need not complete this form unless it displays a valid OMB control number, in accordance with 5 C.F.R. § 1320.5(b), which applies to this collection of information.

B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowling, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

Type of Fire Extinguishing System: If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

Owner/Operator Information: Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

Revenue Sightseeing Flight: Indicate whether the accident aircraft was conducting revenue sightseeing operations under 14 CFR Part 91 at the time of the accident.

Air Medical Flight: Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

Public Aircraft: Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

Purpose of Flight: 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

AERIAL APPLICATION--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

AERIAL OBSERVATION--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

AIR DROP--Aerial operations, other than aerial application, that are intended to release items in flight.

AIR RACE/SHOW--Includes any flight operations conducted as part of an organized air race or public demonstration.

BUSINESS--includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

EXECUTIVE/CORPORATE--Company flying with a paid, professional crew.

FERRY--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

FLIGHT TEST--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

INSTRUCTIONAL--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

OTHER WORK USE--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

PERSONAL--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

POSITIONING--Non-revenue flight conducted for the primary purpose of relocating the aircraft. Examples include moving the aircraft to a maintenance facility or to load passengers or cargo etc.

UNKNOWN--Use only if the primary purpose of flight is not known.

Other Aircraft--Collision: For all accidents involving a collision with another aircraft, including parked aircraft, check "Collision with other aircraft" under Basic Information and complete this section indicating details about the OTHER aircraft involved in the collision.

Airport Information: Complete this section if the accident/incident occurred on approach, landing, takeoff, departure, or within 3 statute miles of an airport. Please refer to the FAA Airport/Facility Directory or other official source for airport information.

Airport Identifier: Provide the official 3 or 4 character airport identifier number.

Runway: Indicate the number of the runway used, including L, R, or C if applicable.

Runway/Landing Surface: Indicate the type of intended runway/landing surface (do not indicate surface conditions). If the surface type was mixed, check all that apply.

Condition of Runway/Landing Surface: Indicate the condition of the intended runway/landing surface. If multiple conditions existed at the time of the accident, check all that apply.

Weather Information at the Accident/Incident Site: Indicate the weather conditions reported at the accident/incident site at the time of occurrence. If no weather reporting was available for the accident/incident site, indicate the reported conditions at the nearest reporting site. Specify the weather reporting site identifier, the observation time, and distance from the accident/incident.

Sky/Lowest Cloud Condition: Indicate the height above ground level of the lowest cloud condition present at the time of the accident/incident and whether coverage was reported as few, scattered, broken or overcast. Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

NOTAMS (D and FDC), AIRMETs, SIGMETs, PIREPs: Describe all NOTAMS (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

Flight Crewmember Information: Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

Degree of Injury: See Definitions on the top half of Page 1 of the instructions. Minor injury is not defined. If an injury does not meet the criteria for another injury category, select Minor.

Date of Last Flight Review or Equivalent: Enter the date of the most recent flight review, or equivalent, completed by this pilot. Refer to 14 CFR 61.56 for accepted equivalents.

Type Ratings: List all type ratings on the pilot certificate. If the pilot holds no type ratings indicate "none." If the pilot holds a pilot certificate other than student and was flying an aircraft requiring an endorsement, enter the type and date of any logbook endorsement(s) for that aircraft. See 14 CFR 61 for examples of required endorsements.

Student Endorsements: If the pilot holds a student pilot certificate, enter all solo endorsements and dates on the student pilot certificate.

Flight Time: Complete the flight time matrix. Solo flight time should be included as "Pilot-in-Command (PIC)" and all dual flight instruction given should be included as "Time as Instructor."

Additional Flight Crewmembers: Complete this section if there were more than two required flight crewmembers on the aircraft. This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

Passenger(s)/Other Personnel: Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to www.nts.gov.

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

- Metal cattle gate on property during emergency landing was damaged and replaced within an hour of the accident.
- Horizontal stabilizer and elevator on the left side of the aircraft was damaged upon impact with the metal cattle gate.
- Left wing strut was damaged upon impact with the metal cattle gate.
- 2/3 of blades on the propeller were damaged upon impact with the metal cattle gate and ground.
- Front cowl was damaged when impacted with the metal cattle gate.
- The nosewheel was torn from the aircraft upon impact with metal cattle gate.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departure time: 17:00 UTC- Location and intended destination: 9S5

Prior to The Accident: During normal operations, our standard fueling procedure at DZONE has the pilots fueling for three skydiving loads, and with an additional minimum of 30 minutes of reserves according to FAR 91.151. Always with the mindset and encouraged to conservatively fuel the aircraft. A typical skydiving load was taught to us as pilots-in-training to be in the average range of 7-8 gallons. We would refuel according to that expectation and the readings on the engine monitoring system called the MVP-50, after the third load was completed. We were taught to verify the amount after each refueling based on the readings of TT10A In-line Turbine meter (Fill-Rite Series 900 Meter) from our fueling system and dipping the fuel tank with a fuel stick.

The past two seasons of working at this operation, I have been flying N71450 the most frequently of all our pilots at our location and had become the most familiar with this aircraft and the fueling system. I was basing my decisions of fueling this aircraft on the calculated fuel burn the engine monitoring system was reporting. On average, it would report that I was burning between 5.5 to 6 gallons for each standard skydiving load I was flying. I would often fuel based off these readings, and normally fuel more conservatively than what the readings showed. On June 8th (Sunday), as we closed our operation until our next working day on June 12th (Thursday), I fueled the aircraft until there was a confirmation of 30 total gallons between the two tanks based off the reading on the fuel stick. I put the aircraft away and it was not flown until June 12th (Thursday).

As part of my preflight check on June 12th (Thursday), I dipped the tanks to confirm the fuel readings matched the ones I took on June 8th (Sunday). The readings matched and I continued to fuel the aircraft based off the fuel burn reading on the engine monitoring system and readings on the fueling meter mentioned above. I deviated from our standard fueling procedure of dipping the fuel tanks on that Friday and Saturday. After we finished work on June 14th (Saturday), I filled the plane to a total of 28 gallons based off the readings mentioned above.

Day of The Accident: I deviated from the standard fueling procedure and did not dip the tanks with a fuel stick before operating the aircraft to verify the fuel quantity. I had fueled the prior day after our operation was completed and was confident that I had refueled the plane appropriately based off the readings of the fuel meter and fuel consumption of the engine monitoring system. I began flying, and after returning from my first skydiving load, we had a break in operations. During the break, I shut down the aircraft and refueled with 6.5 gallons—the amount of fuel burned according to our engine monitoring system. I did not dip the tanks after this refueling and I assumed from my other calculations that I had more than enough fuel to safely complete three more skydiving loads before I needed to refuel. When I departed on my fourth skydiving load of the day (third after refueling), my estimated amount of fuel that I entered into the MVP-50 engine monitoring system (after my last refueling) was indicating 16 gallons of fuel. There had been no indications on the previous flights or on the ground of any fuel exhaustion.

After departing the field, at 7500 ft MSL (3500 AGL) there was a loss of power in the airplane and the airplane went down to 1600-1700 RPM. I was under the false impression that the airplane was still producing some power, and this would be enough to potentially get us safely back to 9S5 (Three Forks Airport). This decision lasted momentarily as when we made the turn, it was evident that we were sinking and would not make the Three Forks Airport. We were over a grass landing strip called Ottertail Lake (MT36) and made the decision to make an emergency landing at this location. We were near a midfield position, around 1000 Ft AGL, to fly a left-handed traffic pattern for a southern landing on the strip. Due to panic, I rushed my decisions and turns in this "traffic pattern", and I started my final approach at this strip in the unfavorable condition of being too high. There were hazards at the end of the landing strip, and with the position of the aircraft on the approach, I decided it would be unsafe to continue my landing attempt at this location.

[The rest of this statement is continued on Page 11]

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

This accident could have been prevented with the pilot utilizing all sources of information for the present fuel capacity and fuel consumption of the aircraft. Prior to the accident, based off the fuel consumption reading on the engine monitoring system and the amount of fuel that I personally pumped into aircraft that, I thought there would be more than an adequate amount of fuel to conduct the flight safely. By not additionally dipping the tanks with a fuel stick to verify the refueling information, I lacked a precise understanding of the amount of fuel on board and the aircraft's fuel consumption. This led to the accident, which could have easily been prevented.

Since the accident, we as an operation have taken certain measures with our refueling procedures to ensure this does not happen again. With the assistance of our A/P Mechanic, we drained the remaining amount of fuel on board of our second aircraft and refilled the aircraft in verified five-gallon increments until reaching a total of 40 gallons (between both tanks). While refueling in these increments, we built a calibrated fuel stick for each tank of the aircraft, to assist in eliminating any doubt when dipping the tanks in the future. Additionally, I will be verifying the fuel in each tank, utilizing these calibrated fuel sticks both before and after each refueling, before the first flight of the day, and after the last refueling of the day (as the aircrafts are put into the hangar).

In addition, all pilots in our operation will be performing these aforementioned refueling procedures and regularly reviewing emergency/abnormal procedures.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

Once I made the decision to land in one of the fields to the right (West) of Ottertail Lake, I started searching for other potential hazards and selected a field without any livestock, structures, or powerlines. The area I selected to land had adequate grass space but there was a metal cattle gate that was the only potential hazard. I slowed the aircraft down as much as possible and secured the aircraft before touching the ground. As we landed, we collided with the metal cattle gate and slowed down to a stop in the field. I cannot exactly recall if we landed and then collided with the metal gate, or if we collided with the metal gate first as we were touching down (I believe it is the former). We immediately evacuated the aircraft once it was fully stopped. There were no observed or reported injuries from any of the passengers on the aircraft and I notified the NTSB and the FSDO in Helena, Montana once we returned to the 9S5.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
