Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Right wingtip and skin damaged. fuselage tubing where landing strut connects fractured. prop strike. fuselage body under right door ripped, crumpled where shock strut dislodged.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed from KEAT at 1:19pm for personal scenic flight with 3 passengers. Flew northbound following the Columbia River. Then proceeded to fly towards Waterville and Badger Mountain, then headed back towards KEAT. Nearing airport, made radio calls communicating location with other traffic in the area. Proceeded in for a 3 mile 45 entry for runway 30. Entered downwind and began standard procedure for landing approach. Coming in on final with a normal approach speed and decent rate. Entered a roundout and while transitioning to flare, the left wing lifted causing the aircraft to touch down on the front right tire, side loading the landing gear. I was unable to get the left wing to level and the tailend of the plane began to drift right causing more side loading. At this point, the landing gear buckled under pressure, folding underneath the aircraft. Then the right wing and prop struck the runway, we skidded to a stop. Immediately following the accident, myself the pilot in command and my 3 passengers exited the plane. I ensured my passengers were unharmed and then proceeded to assess the plane. Airport personnel responded to the scene of the accident along with first responders. Airport manager contacted the FAA and/or NTSB on the phone to obtain permission to move aircraft and clear runway. We were requested to send pictures and then were given the go ahead to remove the aircraft from the runway. Aircraft was successfully removed and no damage was done to the runway.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

While coming in on final approach, I could have added more aileron to compensate for variable wind conditions to have hopefully prevented wing lift.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
