Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Impact to the left wing about 10' inboard resulted in a 7" wide x 5" long removal of the leading edge skin that stops before the spar. No damage to control surfaces or systems. The taxiway sign was knocked over.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

== ==

I self-launched from KLPC on June 27 solo in N307BE at 12:28p PT for a short flight to KSBA to meet with another motorglider pilot. The fog at both airports had just cleared (verified by text msg from the pilot in Santa Barbara), which is what I was waiting on to launch.

Scattered fog was visible along the coast to KSBA as I climbed out. After listening to the KSBA ATIS, I informed them of my approach and requested 15L. I was instructed to stay along Hiway 101, but the scattered fog along 101 was just enough that I paralleled 101 about a mile N to maintain cloud clearance. After a couple minutes, I was instructed to be ON 101, hence the sharp turn S and speeding up to get under the cloud. At this point I was cleared for 15L.

I was a bit high on final, so sped up to touchdown shorter. Due to the 87 ft wingspan of my glider, it overhangs the 75 ft wide runway 15L. I started a left turn while rolling out onto taxiway H, upon which my left wing hit the taxiway sign. This broke thru the left wing leading edge, but did not contact any control linkages nor control surfaces. There was no pilot injuries nor any other damage to the aircraft.

I was clear of the runway, but was instructed to stay with the aircraft. I got out to take pics, and to speak with the airport staff who drove out to help. After clearing my movement with ground control, I started the engine and taxied off to the "C" parking area. The glider was removed the next day by disassembly into it's trailer and transported to an approved FAA repair facility.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

I felt compelled to get off the taxiway to keep it clear, when in fact there was very little traffic. I should have come to a stop on the runway, then start the engine to taxi off, adding only a minute to my time on the runway. Also, until this flight, I mostly only landed on >100' wide runways so I can stay on centerline and know my wings are clear, so narrower runways I have much less experience with.
