To whom it may concern,

On Sunday, June 29th I was part of a sailplane grid at the J. Randy McKnight Nephi Municipal Airport in Utah. While waiting for my sailplane to be towed, I was enjoying watching towplanes land to the west of Runway 17. I observed Kim Hall land his towplane several times. On the final approach for his last landing I could very clearly see that the front wheel of his tricycle gear was 90° out of alignment, such that it was perpendicular to the flight path. Several seconds after this observation Kim touched down and immediately nosed over in the dirt. The cause was undoubtedly the problem with the front wheel.

Sincerely,
