Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Runway sign was hit. Landing gear came off the plane with a total loss of airplane

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I was conducting a normal approach and planned landing. As part of my standard procedure, I typically add a small amount of power just before the flare to level off and allow the aircraft to settle gently onto the runway. When I added power during this landing, the aircraft did not respond as expected. As a result, I bounced slightly on the runway.

At that point, I had to make a quick decision between attempting to salvage the landing or executing a go-around. I judged it safer to initiate a go-around and reconfigure for a new approach.

Typically, when full power is applied during a go-around in this aircraft, it climbs immediately and responds positively. However, in this instance, when I applied full power, the aircraft did not respond normally. It pitched up slightly but failed to gain the expected thrust and lift. This caused the aircraft to approach a stall, and I was unable to maintain the runway heading. The plane drifted off the paved surface, struck a runway sign, and came to a stop on a dirt area adjacent to the airfield.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

I could have initiated the go-around earlier, before bounce-induced pitch-up reduced available airspeed and margin.
