Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Left wingtip damaged. No damage to rib/spar. No fuel leakage from wet wings. Minor scrape on end of right wing. Prop strike. Left main gear bent.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed KEUL and Landed KMAN approximately 2 minute flight to fuel aircraft. Departed with full tanks to 68S after listening to ATIS/AWOS and getting an online weather briefing via Seattle Avionics updated EFB. Determined enough fuel onboard for round trip and good visibility with no enroute weather conditions.

Departed KEUL and upon approach to 68D made appropriate radio calls for right hand traffic runway 24. Made low level pass over runway to observe windsock and determine that runway 24 was indeed the correct runway for current conditions.

Landed runway 24 and noted considerable bounce upon landing and decided a go around was necessary.

Announced go around intentions and resumed right hand pattern for runway 24. Landed runway 24 and again noted two bounces, with aircraft still in control.

Slowed aircraft, applied braking, aircraft veered to the right. Attempted to correct with hard left rudder. Unable to keep aircraft centerline and aircraft veered left again exiting the runway into the dirt/gravel. Upon entering gravel surface left wing touched the ground, followed by the right wing slightly touching the ground. The landing ended with a prop strike.

Likely cause was a pilot induced ground loop at an unfamiliar airport.

Aircraft is damaged with a prop strike and bent landing gear. Wing airframes were not damaged. A professional exam via photographs indicated the aircraft is repairable with no control surfaces receiving and substantial damage. Aircraft will be disassembled and brought to a professional repair station for further evaluation.

An onsite examiner determined damage to an aileron, which the pilot disputes. Pilot operated flaps, rudder, and ailerons from the control stick and noted all had normal movement about each axis.

End.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

Additional training with CFI familiar in the make/model of the aircraft may have helped prevent this incident.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
