Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Broken left lower wing. prop strike, bent rudder, bent left gear assembly

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Recieved weather brief via ATIS 6 miles from airport - proceded to enter 45 degree pattern entry for runway 02 - made downwind leg - made left base for runway 02 - made short final approach for runway 02 - landed on main gear (wheel landing) on runway 02 - as airspeed decreased I lowered the tailwheel - as tailwheel made contact i felt the left wing start to get low - tried to make right aileron correction but did nont make enough correction and lower left wing made contact with runway - when lower wing made contact immediatly moved power to full and tried lifting tail back off the ground to perform go around - could not get tail wheel or left wing off the ground in time before going off runway to the right side - as the aircraft left the runway the left gear assembly struck some rough terrain and slowed abruptly causing the plane to flip over and land on its back - upon both myself and my passanger exitining aircraft we secured the aircraft and stood by till help arrived - aircraft was then lifted by crane back onto its landing gear and brought to onsite hanger where its stored

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

More training for crosswind landings and better timely correction for when winnigs become un-level
