Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Aircraft frame bent, aircraft nose pushed up into cockpit, aircraft propeller bent, aircraft engine crushed into fuselage, aircraft right main gear detached from airframe, aircraft left main gear bent. aircraft wings bent, horizontal stablizer detached from airframe, vertical stabilizer bent. Electrical wires pulled/broken, electrical poles damaged, transformer damaged. Sheet metal building edge dented.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Preflight calculations: CG on Takeoff: 50.7(1478 lbs), CG on landing: 50.1(1448), Takeoff dist over 50' obstacle: 1510, Landing dist over 50' obstacle: 1195, Rate of Climb: 440 fpm
 Wx conditions: wind 060 @ 4, Temp 21 C, skies clear

Flight Purpose: introductory instruction flight

Flight Description: IP and Student perform preflight and runup and reveal no problems. An initial departure is made using runway 1 around 16:00 UTC, followed by a turn out to the east. IP instructs student on basic airwork for 0.8 hrs(straight and level, turns, climbs and descents, etc). IP and student return to land on runway 1. Landing is made without issue followed by a full stop taxi back. Final departure is made using runway 1 around 17:30 UTC. On ground roll the plane indicated normal power and accelerated to Vr without issue. We rotate and enter ground effect to build speed. At sufficient airspeed we exit ground effect and the plane immediately shows decreased performance and struggles to climb. IP takes full control of aircraft. At this point there is no sufficient runway remaining to land. The decision is made to continue due to insufficient altitude for a turn to return to the airport. IP pitches airplane at Vx to avoid obstacles immediately off departure end of runway. Additional obstacles require banking resulting in additional loss of energy. As the plane continues it encounters a power line it can not outclimb. Directly before impact IP trades the little remaining energy for altitude in an attempt to outclimb wire and reduce airspeed should impact become inevitable. The left main gear of the aircraft clips the wire, catching and forcing the plane into a nose dive and spin. The nose of the aircraft is now nose down 90 degrees and the off center force applied to the left main gear creates a spinning motion. The aircraft is around 80 ft AGL. IP applies rudder pressure to counteract spin. At this time the left main gear breaks free from the fuselage and the aircraft separates from the wire. IP continues rudder pressure to counter act spin and applies backpressure to reduce airspeed on contact with ground and reduce rate of descent. The left wing of the aircraft contacts a one story building rolling the aircraft to the right at which point the right wing strikes the ground. The engine and forward fuselage strike next. IP and student proceed with engine securing checklist eliminating power and fuel flow. No major injuries were sustained. No fire arose as a result of the aircraft systems and its fuel. Authorities arrived on the scene shortly thereafter and a report was made to the NTSB.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

Additional calculations for density altitude could have been made throughout the day taking into consideration the obstacles at the end of the runway and the increasing temperature. A more thorough pre-departure check could have been used after the full stop taxi back evaluating aircraft condition with greater detail. When lack of climbing power became evident a runway overrun would have been preferable to attempting to continue climbing.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Other Services, if any, prior to departure:

EVACUATION OF AIRCRAFTWas an emergency evacuation of the aircraft performed? ☒ Yes ☐ No

Method of Exit – Describe how the occupants exited and how many occupants evacuated each location:

Both occupants exited the aircraft through the right door as the left door was unusable due to bending of the airframe. Proper engine securing techniques were used prior to exiting the aircraft to prevent a ground fire.

OTHER AIRCRAFT – COLLISION (If air or ground collision occurred, complete this section for other aircraft.)
