Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

Airframe: The aircraft is completely inverted, resting on its roof and tail with the landing gear pointing upward. The fuselage top has likely suffered crushing damage from the weight of the plane resting on it.

Propeller/engine: The nose and propeller assembly are in direct contact with the pavement. The propeller blades are bent

Wings: The left wingtip is pressed against the ground, The right wing appears elevated but may also have structural stress.

Landing gear: The main landing gear are intact but inverted. No obvious separation.

Tail: The empennage looks mostly intact, but stress from the flip

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On 9-26-2025 at 13:45, I departed KDEW (Deer Park Airport) with my flight instructor in a Cessna 172 for a training flight to KCOE (Coeur d'Alene Airport). The purpose of the flight was to conduct a series of solo full-stop landings as part of my flight training progression.

After a normal en route flight to KCOE, I entered the traffic pattern under VFR and communicated with KCOE Tower (ATC). Initially, the plan was to conduct three solo full-stop landings. However, during the instructional portion of the flight, with my instructor onboard, we completed:

Four touch-and-go landings

One go-around

One full-stop landing

Following the full-stop landing, I taxied to the FBO ramp where my instructor exited the aircraft and remained on the ground to observe my solo flight. After completing the appropriate checklist procedures, I received ATC clearance to taxi to Runway 24 for the solo portion of the flight, which would consist of three full-stop landings and takeoffs.

As I arrived at the hold short line for Runway 24, I was awaiting ATC clearance for takeoff. During this time (14:40), a sudden gust of wind—estimated to be significantly stronger than the prevailing winds at the time—lifted and flipped the aircraft onto its back. The aircraft sustained damage, and I could not proceed with the solo flight.

Emergency personnel were notified, and I exited the aircraft safely without injury. My flight instructor ([REDACTED]), who was observing from the FBO, arrived on scene shortly after. I was contacted by the Airport director and he took a statement and my name and phone number

Once the scene was secured and it was deemed safe to proceed, a forward-reach forklift was obtained and used to return the aircraft to an upright position. The aircraft was then towed to a tie-down area on the ramp, properly secured, and we subsequently departed the airport.
