Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Plane experienced structural damage of firewall and supporting structure. Left wing was had a crease along the underside and leading edge. The aileron had some minor bending.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

After Closing my flight plan from Gillespie Field (SEE), I proceeded VFR to Land on runway 4 at Catalina Airport (AVX) as clouds prevented me from using 22. There was a light tail wind and I ended up landing a quarter to a third down the 3000 ft. down sloping runway. I believed I could make the runway based on having made 1000 ft. landings with this plane in the past. As I progressed down the runway I realized I was not going to stop in time. Because of the drop off at the runway and the encroaching clouds I did not feel I could safely perform a go around. I chose to run off the runway, in doing so I encountered a small berm which resulted in firewall damage to the aircraft. While taxiing around a drainage ditch to get back to the taxiway I encountered a wood post creasing the leading edge, underside of the left wing and put a slight bend in the aileron. There was no prop strike or injuries to myself or my wife. There was no property damage. After taxiing to the ramp, I spoke with the airport manager and asked about a mechanic to look at the aircraft. I was given the name of a mechanic who flew over the next day to assess the damage. The result was that there had been considerable damage and the plane should probably not be flown. We are working on a plan to remove the plane from Catalina and have it repaired on the main land.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This accident could have been prevented by not choosing to land with the tail wind and a runway with a steep down slope. More careful flight planning to include evaluation of runway parameters is required. The option to land with the wind should be the last option and only under certain conditions. Do not let the excitement of the moment cloud your judgement.
