Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Landing gear collapsed which lead to propeller and cowlage damage. Given the parts of the aircraft that were damaged, I marked unknown above due to not knowing if the damage reached the level of substantial or not.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

I departed Dead Cow dry lakebed at approximately 9:30 for a local area flight with another aircraft to explore backcountry landing sites in the area. Weather was VFR - clear skies, unlimited visibility, calm winds verified via Foreflight.

The other aircraft landed first on a grassy knoll. The pilot reported rough terrain where he landed and suggested I select an alternate aspect of the knoll. From the air, I evaluated the knoll and selected what appeared to be a smoother surface on a different aspect.

During the landing, the terrain slope was steeper than assessed resulting in a hard landing that exceeded the gear's design limits. The main gear collapsed. No injuries occurred.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This incident has reinforced several important lessons:

Enhanced Go/No Go Criteria: When another pilot reports unfavorable conditions at an unfamiliar landing site, the conservative decision is to overfly and reassess rather than attempt a landing on a different aspect.

Terrain Assessment: I have engaged an experienced backcountry instructor to review ground slope assessment techniques including multiple evaluation passes from different angles and use of visual references to judge terrain slope. I have reviewed NTSB Aviation Investigations of similar incidents to identify common patterns and thus I techniques I can employ going forward.

Backcountry Proficiency: I have completed a comprehensive review of this incident with a trusted pilot focusing on risk assessment and decision making processes for off-field landing operations. Further, I am working to schedule with a CFI tailwheel training in a backcountry capable aircraft (such aircraft for rent are few and far between but I have found one and am working to confirm the schedule).

These corrective actions address the primary factor in this incident which was inadequate terrain slope assessment.
