Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Propeller blade tips sanded off. About 3cm of inboard trailing edge of flaps sanded off. Nose gear door scraped. Inboard flap track brackets cracked. Transponder antenna and bottom COM antenna broken. Two paint scrapes on belly of plane.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The flight was a test flight to verify proper operation after replacing the starter (a procedure that required 12 hours). I took off at 09:35, circled at 10,000 MSL above the airport, then made a full stop landing with engine shut down at 09:59 to make an adjustment, then took off again at 10:07 and did two touch-and-go landings. The gear-up landing was to be the final, full-stop landing and occurred at 10:21.

Aircraft landed with the landing gear retracted and slid to a stop on the runway. The pre-landing checklist was completed on downwind and the gear was confirmed down by checking the lights on both the turn to base and the turn to final. However, the gear switch was still in the up position.

The problem was a result of the pilot not confirming the gear switch was actually in the down position during the pre-landing checklist and then confirmation bias causing the pilot to see three green lights during subsequent checks - the LEDs are very dim and the sun was very bright.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

To prevent a recurrence I am (1) going to confirm switch position with my hand on subsequent checks of gear down, (2) install brighter gear lights, and (3) install a gear warning horn.
