Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Spinner, Propeller, propeller backing plate, engine, engine mount, firewall, exhaust, front and top window, fuselage tubing, Right and left wing spars, struts, ribs, fabric, top rear turtle deck, vertical stabilizer, rudder, right elevator, Flap control crossover bar inside cabin, rudder pedal connecting rods, right brake assembly. All items listed are beyond repair. These are visible items without removing panels for a more in-depth examination.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I had been flying all afternoon at and various off airport locations and decided to land at one last spot on my way back to KCPR. It was an uphill dirt strip with rapid rising terrain at the north end of the runway and an approximate 300' cliff at the south end of the runway. I flew two inspection passes and then flew approximately two miles north before turning back for an approach to land. On short final I encountered sinking air and applied throttle to maintain altitude in order to clear the rising terrain. When I crossed the threshold I encountered a slight tail wind and my groundspeed was fast. Upon landing I applied too much brake pressure causing the aircraft to flip over.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

Better inspection of the conditions prior to landing and applying less brake pressure.
