NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

~~2/4/2026~~ 2/4/2026 N9976Y

I started the day of the incident at 1L8 where we hangar the airplane. My dad and I had done some pattern work here the day prior to practice. It is property of his business, Precision Ag Aviation LLC. The day of the incident ~~we~~ we flew to KSGU and did 3 landings together in the pattern. After that, we shut down at the fuel pumps, refilled and discussed the next flight plan. We both felt confident in my abilities, so I got in solo to fly the pattern and do some landings. I departed runway 19 and flew left traffic until I was ready to turn base, calling my positions the whole time. Then, I checked that the area was clear, and called/turned. When I turned final, I gave myself plenty of distance, perhaps half a mile or more. My approach was stable, straight and my speed was good. As I was approaching the numbers, a Pilatus flew over my head as if it hadn't seen me on final and had begun climbing just prior to visual contact. This was surprising as I heard no calls from this aircraft. However, he still maintained a safe distance and went around to be no factor so I continued my landing to a full stop taxiback on Alpha. For the second, I did the same, and made a very nice landing. Full stop and taxiback to depart 19 a third and final time. I repeated the pattern, came in on final controlled and on centerline. Upon touchdown, the landing was good. I was giving normal rudder inputs until I accidentally tapped the left brake.

RECOMMENDATION (How could this accident/incident have been prevented?)

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

This initiated a swerve to the left. I corrected with right rudder and brake, got it going back down the runway and put the tail down. The attitude was more tail-high than normal so it came down hard. I believe this caused the damage to the tail. Realizing this in the heat of the moment and trying to slow down, I hit the brakes ~~again~~ again. This caused the propeller to strike the ground. The engine quit, I pulled mixture and shut everything off, and got out. Details worth noting. This aircraft has heel brakes. Only ever flying it from the back, I realized that they are hard to reach and not very effective. This is not the case in the front. They protrude more and will be much more effective because of this. My lack of experience with this rigging taught me a valuable lesson. I fully recognize that my own error is the main cause of this and I will use it to learn and better myself.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
