Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

Appeared to be substantial damage to N4464R -- left wing pushed back and tip torn, prop bent, engine mount and firewall damage. The hangar door pushed in, bent and supporting frame bent.
Super Cub in the hangar suffered bent prop and right wing damage.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Statement of [REDACTED] regarding 2/5/2025 aircraft accident N4464R:

At approximately 1415 MST on February 5, 2025, I experienced a loss of control accident following a sudden release and full aft failure of the right seat on rotation for takeoff runway 11, Nampa. The result was excursion off runway across grass infield, taxiway alpha and collision with an end hangar. I suffered no injury, but damage to 64R, hangar, and a super cub within the hangar appear substantial. No fuel leak, smoke, or fire. Shook up, I called [REDACTED] and asked him to call board members for me. Airport staff shut off ELT. I called FAA Ops (Seattle), and they further linked phone call to NTSB and local FSDO. [REDACTED] came over from FSDO to briefly investigate, and cleared T-Craft to move 64R back to T-Craft Hangars. [REDACTED] supervised the move.

My experience: 4516 total hours, with 7135 landings logged; 525 hours as CFI right seat, often involving multiple landings per hour. I accumulated 3327 of my hours in the last 20 years, The last 4 years I flew 54, 61, 28 and 52 hours for 2022, 2023, 2024 and 2025 respectively with 28, 26, 3 and 25 hours logged as instructor.

Leading up to my accident on February 5, I had flight review with [REDACTED] on August 25, 2025, and 21 hours in last 6 months, but no landings in last 90 days. So, Wednesday, February 4, I flew 7593S for an hour solo – slow flight, stalls, steep turns, and lazy 8's from left seat with 3 good landings at Murphy and one at Nampa. In short, I felt good about taking 64R up to put some polish on maneuvers and landings from right seat.

Preflight of 64R was normal, I climbed into the right seat, slid all the way forward, felt the seat latch catch, and the seat felt secure with a little wiggle and backward pressure. Runup was normal. I taxied into position, lining up and waiting for departing traffic to allow for safe departure. I applied full throttle and felt smooth and rapid acceleration (self only and 20-gal total) so I initiated a relatively aggressive rotation for short field take off. The right seat suddenly broke free and slid full aft. With my right hand still on the control yoke 64R over-rotated, briefly striking tail ring. I immediately let go of the yoke and grabbed for top of instrument panel to try to move forward as I had lost my handle on the throttle and could not reach the right pedal to counteract the torque and p-factor causing violent swerve off runway. At this point I am looking outside with my primary concern was trying to reestablish directional control, blindly feeling for throttle with my left hand and with 64R still accelerating. As I crossed taxiway alpha, I managed to slouch, stretch, and touch pedals – not enough to effectively alter direction, but able to hit the brakes about 50-70 feet before impacting the hangar. I believe I was finally able to pull throttle just before impact.

Post crash investigation with [REDACTED] revealed that the right seat pin could partially engage with the forward stop if the seat was moved forward far enough to contact that stop.

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

Installation of safety seat stops on aircraft, and more aggressive testing of seat engagement pins by pilot prior to takeoff.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
