Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

The following items received damage: Fuselage frame above pilots seat, wings, vertical stab, ailerons, elevators, rudder, wing struts, wind screen, nose cone (composite propeller scraped, not broken or bent)

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

At approximately 17:30 MST I landed the aircraft at Buzzard Gulch, an unimproved back country strip approximately 20 NM SE of Payson, AZ. There is no road access to this strip. The landing was uneventful, and I taxied around the area looking for the best take off path. The aircraft is an American Champion Scout, equipped with 29" bush wheels and designed for back country operations.

While taxiing on the rough terrain, the tail wheel spring broke, and the entire tail wheel assy was detached from the aircraft. While talking with a back country pilot friend on my mobile, it was suggested that I could lift the tail off the ground and take off by applying high power and forward stick, which lifts the tail off the ground prior to rolling. I tried the technique with brakes on, and it worked, so I released the brakes and executed the take off while holding the tail off the ground. It was dusk when I took off at approximately 18:45 MST.

I noticed during the take off run that the landing light was most likely not working. I proceeded west to my home airport, Sky Ranch AZ, 18AZ, intending to land on the dirt strip which parallels the main runway. Since I suspected the landing light was not working, I called ahead and arranged to have some cars shine their headlights on the runway to provide additional light. Reaching Sky Ranch, I did one low pass, executed a LH pattern and returned for landing. By now it was dark. I executed a good wheel landing, and began working the stick and the brakes to keep the tail off the ground for as long as possible. After slowing down, the aircraft pitched forward, hit the prop and nose, and then rolled over on its back. At that point I was hanging from my four point restraint. Aside from a very slight bump on my forehead, I was uninjured. The aircraft received substantial damage during the roll over.

I checked the front wheels after landing and they were rolling freely. Although I do not remember doing so, I most likely applied the brakes too hard in an effort to keep the tail up. This caused the aircraft to pitch forward and roll over on its back.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

- 1) Take another aircraft along when landing on a back country strip to provide return transportation in case of problems.
- 2) Avoid taking off with a damaged tail wheel unless it is necessary for survival.
- 3) Avoid taking off at dusk or dark with a compromised tail wheel unless it is necessary for survival.
- 4) When landing with a damaged tail wheel, do a normal landing. Avoid holding the tail off the ground to avoid damage unless you have recently practiced this procedure.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

The tail wheel spring broke. It is not clear whether this was due to defective spring material or an excessively rough surface.

The tail wheel spring is the standard part from a 2023 American Champion Denali Scout, 8GCBC.
