Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

1. Nose landing gear leg bent, shock absorber and securing hardware damaged.
2. Propeller strike & delamination.
3. Tailbox and fairing crushed.
4. Rudder deformed.
5. Engine sudden stoppage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

This was my first solo cross country flight, planned from KRNT to KCLS. I left KRNT at 4:42pm. I followed my navlog and everything went very well. When I got to KCLS at 5:59pm, there were hardly any aircraft in the vicinity. I joined the traffic pattern, announced my intentions to land on runway 34. On final, everything was set up properly. Airspeed 60kts, aircraft was on centerline, flaps full. I went to land, but rounded out too high. The aircraft bounced, the bounce was light and instead of going around I thought I could fix the landing. I put power in trying to bring the plane more smoothly back to the ground, knowing it was a very long runway. But I messed up, I put in power (I don't know how much, but I'm sure it was too much) and pitched forward to bring the nose down, thinking I was bringing the plane down gently, but nothing went gently. I pitched the plane too far forward with power in, and the prop struck, which forced the plane backward and caused a tail strike. The wind was gusting up to 10 knots, which isn't very much, so I don't know if that contributed. When the plane settled on the runway, the engine had turned off. KCLS is an untowered airport, and I was worried that another aircraft may come in. I restarted the engine, and taxied off of the runway. I brought up the airport diagram and taxied over to the run up area, since I wasn't sure where I could park the plane. Engine started up just fine. I shut it off in the run up area and inspected the damage. A pilot who had just finished her flight saw me waiting at the run up area, and she and two other men helped me taxi it to the transient parking area and tie down the aircraft.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

After that first light bounce I needed to do a go-around instead of trying to save the landing.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
