☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Left wing tip damaged, left landing gear compromised (explained below), no property damage

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Arrived KLAM 15:30. Completed walk-around and preflight including oil and fuel (with manual fuel dipstick) checks. Confirmed weather. Confirmed safety checks including door and passenger restraint security. Completed engine run-up including magneto and carburetor heat checks. Set flaps to 15 degrees, announced intentions on CTAF. Completed Rnwy 09 takeoff without incident.

Remained on runway heading for length of runway while retracting flaps and climbing at 500 ft/min. Turned NE to clear pattern for right traffic (there was none) intending a short recreational flight. Decided to head toward Ohkay Owingeh (E14) for a practice stop-and-go landing before returning to KLAM. No automated weather reporting system at E14 so took KLAM report into account. Announced presence and intentions on E14 CTAF to continue crosswind past Rnwy 34 to enter left downwind for Rnwy 16. Announced downwind entry to pattern. Very faded windsock (difficult to distinguish from desert grass and soil) on west side of 16-34 indicated a drooping sock and ~7kt wind at ~210 degrees. Throttled back when abreast of 16 while maintaining altitude to reduce speed. Announced entry to Base leg and set flaps to 20 degrees. Announced turn to Final and added full flaps. Maintained stabilized approach with slightly low right wing to maintain centerline while aiming for touchdown at near end of 500' markers. Achieved touchdown target. Decelerated to under 10kts intending a brief stop before throttling up for takeoff. Before flaps retracted, brief visual on dust to right of runway followed immediately by violent lifting of right wing and weathervaning into wind at which time full throttle and full left rudder were applied to increase rudder authority while applying full right aileron—to no avail. Right wing and tail were airborne pivoting on left tire. Tail continued to lift resulting in prop strike amplifying rotation and direction change. Came to rest on right (west) shoulder of runway at ~290 heading. Immediately confirmed passenger was unhurt (verbally confirmed), killed master (and mags), and closed fuel selector. Opened right door to assist passenger egress before exiting plane via left door.

No one attending airport. Knocked on mobile home and found security person. Notified him of incident. Got ground transportation to KLAM to retrieve vehicle. Plane was drug clear of 16-34 during which time left landing gear failed, left elevator, left door, and left aileron were damaged.

Local police and Community Emergency Response Team (CERT) arrived. Police leadership was contacted. NTSB was contacted. Pilot related incident to (three) NTSB personnel on policeman's speakerphone. Police confirmed NTSB released plane for removal.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

Though faded windsock would not have changed outcome, it's replacement with a more visible sock would be a benefit to traffic.

Dangerous to speculate, but given the propensity for "dust devils" in the area I suspect the brief visual on dust just prior to the incident was initially a clear air disturbance and became visible as it passed the west runway shoulder where there was no vegetation and it picked up dust.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
