Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

The left wing and propeller hit the dirt strip between the runway and taxiway. The end of the left wing was significantly dented. The propeller had a strike mark on it.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On April 22, 2026, the ATIS I got when inside the airplane was 1853Z: Charlie 260/6 10 AM clear, SCT 3500, altimeter 30.14.

When I was preflighting the airplane and walking around the plane the winds felt light.

While performing my before takeoff checklist procedures in the run up area, the winds continued to feel light. The plane was not rocking like I have felt in previous flights at the run up area when I was experiencing strong gusting winds.

When I rotated at take off, I didn't feel strong winds and I continued on my upwind with what felt like normal winds. As I turned crosswind, winds felt normal. As I was in the downwind, I started to feel strong gusting winds. I was asked to extend my downwind and turn base after a plane on final past by. I turned base around Lake San Marcos. As I turned final, I was on the correct glide slope and at the correct speed.

As I was coming in to land and was over the runway, I could feel strong winds coming from the right. I used my ailerons to get over the center line and rudder to straighten out. I was coming down to land and holding off my descent as I have been trained and how I have executed my previous landings. As I was getting close to the ground, maybe 20 feet or so away, an extremely strong gust of wind hit my right wing and picked my plane up and pushed it to the left. The plane was pushed over to the left with the left wing hitting the dirt area between the runway and taxiway. It then bounced back up and I started rolling at about 45 degree angle from the runway and towards the Western Flight parking area. As I entered the Western Flight parking area, I pushed as hard as I could on the brakes and pulled back on the ailerons to stop the plane before it rolled into another plane that was parked on tarmac. I successfully stopped the plane from getting close to that other plane and did not hit it.

Within a few minutes the airport operations team was out at the plane. Jesse was the first to arrive. He asked me if I was okay and then to turn off the plane and put the key on the dashboard. I complied. After I got out of the plane, the airport operations people told me the prop had hit as well. The damage I saw was in the left wing and left aileron.

Airport operations towed the plane back to its parking spot in the Pacific Coast Flyers area. After I took my personal items out of the plane, noting the TACH and HOBBS, I went to the Pacific Coast Flyers office to report the accident. Kyle was in the office and I told him what had happened.

NOTE:

Two days prior (April 20, 2026), I had a solo flight scheduled. During that scheduled flight time, I completed my checklist up to the taxing portion. On that day when I got the ATIS, it had winds at 250 at 8 knots with gusts at 16. While walking around the plane during pre-flight and sitting

in the plane prior to getting the ATIS, I could feel the winds rocking the plane and determined that it was too windy for me to fly safely. I shut down the plane and logged Hobbs of 0.2 with the schedule master software.
