

NATIONAL TRANSPORTATION SAFETY BOARD • PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT Use this form (Form 6120.1) to report civil and public aircraft accidents and incidents

BASIC INFORMATION
Accident/Incident Location

 Nearest City/Place: Superior State: AZ

 ZIP: 85173 Country: USA

 Latitude: 33.285039 Longitude: -111.122463

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

 Date: 05/10/2026 Local Time: 13:27
 mm/dd/yyyy HH:MM

 Time Zone: UTC-7

 Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

 Registration Number: N6067J

 Manufacturer: Cessna

 Model: 150 Aerobat

 Serial Number: A1500367

 Year of Manufacture: 1,972

 Amateur-Built: ☒ Yes ☐ No If Yes: ☐ Original Design ☐ Kit/Plans

Make: _____

- ☒
- IFR-Equipped and Certified
-
- ☐
- Commercial Space Flight
-
- ☐
- Unmanned Aircraft

 Maximum Gross Weight: 1,600 lbs.

 Weight at Time of Accident/Incident: 1,440 lbs.

 Number of Seats: 2 Flight Crew Seats: 2

Cabin Crew Seats: _____ Passenger Seats: _____

 Number of Engines: 1
Category of Aircraft

☐ Minor ☐ Destroyed
 ☐ Unknown

Aircraft Fire

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

Both ends of propeller bent ~6 inches from tip. Ends of both wings moderately crumpled upward. Large gouge in right wing leading edge just past strut connection. Nose gear collapsed. All wheel fairings damaged. Rear window broken in multiple places.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On May 10th, 2026 I departed KFFZ around 12:50 MST in N6067J, a C150L. I intended to fly to E81 in Superior, AZ, do a touch & go and return to KFFZ. The flight to E81 proceeded without issue, I announced my arrival on the CTAF and entered the pattern at E81. I wound up having to make a somewhat steep approach to runway 04 given the surrounding terrain. This involved using forty degrees of flaps and slipping the aircraft on final. I did not perform a landing briefing. Despite this I touched down on the runway smoothly without incident. Keeping the nose of the aircraft up I applied full throttle, but failed to retract the flaps to twenty degrees as is prescribed in the balked landing procedure in the C150 POH. With full power the aircraft was able to lift off the runway, but could not escape ground effect. Shortly after takeoff I noticed this and also realized that the flaps were still fully extended. I began attempting to retract slowly. Initially by 5 degrees. This did not increase my rate of climb and I now became aware that there was some terrain ahead that I would not clear at my current altitude. I made a shallow turn to align with the US-60 in an attempt to buy myself some time. After completing the turn I attempted to retract additional flaps. Aiming for a few additional degrees this time, I wound up retracting 10 degrees. In retrospect this was too much, as it caused the aircraft to stall. I felt this immediately and applied downward elevator. I had just enough altitude to regain a marginal amount of lift and flare to cushion the landing to a stall from only 5-8 feet instead of 30 or so feet. The aircraft contacted the ground, narrowly missing a truck. I later found out that the truck was actually struck by the prop. The right wing then collided with a street sign, cause the aircraft to pivot. The nose gear collapsed on a median in the highway and the prop struck the ground. Stopping the engine. I shut off the mixture, fuel, and master switches before exiting the aircraft. I sustained no notable injuries. The airplane was moved to E81 for storage.

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

The primary causes of this accident were a lack of sufficient training in type, lack of situational awareness, as well as lack of recent experience performing touch and gos. As with most incidents it is always a number of factors that contribute. Had I been more familiar with the aircraft I was operating I would have been more aware of its' performance with 40 degrees of flaps. Had I conducted a briefing prior to landing I would have realized I needed to retract the flaps prior to applying full power on the runway. Had I performed more than 2 touch and gos in the previous 90 days I would have been more accustomed to the procedures associated with such a maneuver. In summary, additional familiarity with the aircraft as well as more thorough briefings with regard to operations outside of my normal purview could have prevented this accident.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
