

NATIONAL TRANSPORTATION SAFETY BOARD • PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT Use this form (Form 6120.1) to report civil and public aircraft accidents and incidents

BASIC INFORMATION
Accident/Incident Location

 Nearest City/Place: RIVERSIDE State: CA

 ZIP: 92509 Country: USA

 Latitude: 33.988N Longitude: 117.4099W

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

 Date: 05/10/2026 Local Time: 20:40
 mm/dd/yyyy HH:MM

 Time Zone: PDT

 Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

 Registration Number: N5832L

 Manufacturer: American Aviation / Grumman

 Model: AA5

 Serial Number: AA5 - 0232

 Year of Manufacture: 1,972

 Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Original Design ☐ Kit/Plans

Make: _____

- ☐
- IFR-Equipped and Certified
-
- ☐
- Commercial Space Flight
-
- ☐
- Unmanned Aircraft

 Maximum Gross Weight: 2,200 lbs.

 Weight at Time of Accident/Incident: 1,800 lbs.

 Number of Seats: 4 Flight Crew Seats: _____

 Cabin Crew Seats: _____ Passenger Seats: 3

 Number of Engines: 1
Category of Aircraft

Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

Left main and nose wheel separated from the airplane. Propeller impacted the ground, bent under power. Engine mount fractured. Right wing flap bent and broken, wingtip damaged. Tail bent to the right, ventral (keel) bent, elevator damaged. Left wing flap damage.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On the evening of 05-11-2026, I went to the KRIR airport with the goal of renewing my VFR night currency. I had not landed at KRIR at night previously. Last time I had logged night time and was night current was in November 2021. The previous flight with N5832L was on 03/28/2026. I fly often, yet during most of April 2026 I was on travel and since the return on April 26th I waited for my jet lag to ease and for less gusty conditions.

The weather was good, sky clear and low winds. I checked the weather online before the flight, as well as getting the ATIS information from KRAL on the EFB. My intention was to cruise about 30 minutes then return to the KRIR airport and perform the 3 takeoffs and landings needed for night flight currency. I was the only person in the plane.

Takeoff time was 7:41PM, when there was still plenty of light. The takeoff and the flight was uneventful, everything was working as expected. I climbed to the NE over KSBD then flew W along the San Gabriel Mountains, abeam KEMT I turned around to the E and started a slow VFR descent to 3500 ft, then turned S once past the KONT airspace and continued the VFR descent. I monitored the approach frequency 127.0 and used to KONT ATIS for the altimeter setting.

I switched to KRIR unicom frequency once past KSBD, reported my position and intentions. The time was about 8:20PM, there was still some remaining light.

The wind on the ground were light, favoring runway 24. I started a descent to the KRIR night TPA of 1800 feet following Hwy 60 West from the 215@60 Hwy intersection. I did not see or hear anyone in the pattern at KRIR. I entered the pattern by crossing over the departure end of Rwy 24 on a crosswind leg, trimmed for normal pattern speed of 100MPH with 1/3 flaps. While over the airport and on the downwind leg, I could see the runway, the runway lights were off. I tried to turn on the runway lights repeatedly by clicking the radios 7 and 5 times, multiple times, without success.

I flew the downwind leg at 1800ft, around and over the Mt. Rubidoux, where I observed the flag showing the wind was indeed light and almost aligned with runway 24. Past Mt. Rubidoux, I turned left base and final and reduced power to idle, trimmed to 85MPH while still trying to turn on the runway lights. I had visual contact with the runway at this time. I kept the altitude slightly higher than normal to clear the obstacles on the approach to runway 24. I reported on final runway 24 and slowed down to 70MPH with full flaps. This trim produces a steep descent with a slight nose up attitude. At this point I lost visual contact with the dark runway, so I started visually searching for the runway while judging my position based on the airport buildings. I visually saw the ground just in front of the airplane and realized I was not over the runway, while at an estimated 20-30 feet over the ground. I added full power to abort the landing, holding the slight nose up altitude for the climb. I did not have time to reach for the flap control, I knew that 5832L would climb even with full flaps at full power. The engine responded while the descend continued for a few moments, the undercarriage hit something, the plane violently veered to the right, the nose dropped, hit the ground, then the plane veered again.

Once the plane stopped, I was not hurt and the seat belts were on. I released the safety belt, took off the headset, turned off the electrical power and the ignition, then tried to exit the plane. I could not open the canopy more than about 5 inches. About 20 seconds after the accident people with flashlights approached, I confirmed to them that I was not hurt then asked for help to open the canopy from the outside, which was easily done. I exited the plane, then turned back and switched the fuel to the off position. There was no fire. I estimate

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

I am not sure how did I miss the night closure NOTAM which had been active for a few years, despite being based at KRIR and actively flying there for quite a while. I might have noticed it in the past but possibly ignored it because I didn't realized it was a long term NOTAM. It was not mentioned during the last BFR, which was at KRIR.

It should be possible to have at least some night lights over the runway permanently, not sure why that is not the case everywhere.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
