Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

The right wing damaged when the aircraft fell onto the wing after the right main gear broke, which also caused a prop strike and damage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Around 12:45 I departed from Chino Airport (CNO) with flight following, the weather was clear with winds light and variable, and I was headed to Kanab Airport (KNB). The flight to Kanab, it was sunny and I had moderate to light turbulence between Chino and Las Vegas and light turbulence between Las Vegas and Kanab. Within 15nm of Kanab Airport flight following, we closed flight following with the airport in sight. I switched radio stations to AWOS to pick up the weather at Kanab and found that they favored runway 19 with a crosswind of 10 gusting 19 then I switched to CATF 122.8 and listened. I rechecked the weather at 5miles out on for flight and the wind had switched directions so runway 1 was favored. Hearing no traffic, I called 5 mile extended base for runway 1. Hearing no traffic, I called 5 mile final when lined up with the runway and continued my descend for landing. It was smooth, I didn't experience any turbulence or windsheer on my descent. Before I had touched down, I put in my counter correction for crosswind. When I landed, I landed on the main gear, I didn't intend on landing on the main gear but instead 3 point land it. Once the main gear sat down it felt good so I proceeded to set the tail down, just before the tail set I caught a gust of wind that blew the tail sideways to the right, I corrected with full right rudder. Then, I counter corrected with left and then right again and left then the last time I corrected with right, it was unsuccessful as I was heading into a groundloop. The plane spun all the way around 180 degrees then momentum carried me in a 90 degree reverse corner, at that time the right main gear broke dropping the plane on the right wing and causing the prop strike, the resting position was no more than 2 feet after the prop strike. The plane was positioned perpendicular to the runway with the nose pointed at the runway. At this point it was around 4:27pm MDT. Within a couple of minutes, emergency vehicles were on sight. No one was injured and NTSB was called and we got permission to move the plane after we shared the pictures of the plane with NTSB. Plane was removed from the runway and normal airport operations resumed.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

This incident could have been prevented by adding power to increase air over the rudder to stabilize the tail position and either go around or reland the plane with greater control.
