☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Puncture of the fuselage skin directly under the wing on the right hand side.

Breaking of the bottom right edge of the fiberglass box encasing the wing roots in the fuselage.

Cracking of the skin and inner fiberglass of the left wing at the edge that meets the fuselage.

Damage to the fuselage surface where the left wing edge made contact.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

2026-05-23 was the first day of Dust Up at Ephrata Municipal Airport (KEPH), an annual soaring event (not a competition).

09:00 am: the pilot and another 2 PSSA club members attended the Introduction, Orientation, Safety and Weather meeting at KEPH.

10:30 am: all 3 PSSA members headed out to the parked glider trailer to assemble it using a printed Assembly Guide. The trailer was secured in position. The glider fuselage was rolled out of the trailer on its dolly and its ties removed. The 2 main wing pins were fully retracted. The right wing was removed from the trailer, rotated into position, and its spar root end inserted into the root box in the fuselage. The right trailing edge pin was pushed home and both left and right main pins were pushed to the 1/2 position as per procedure. A wing stand was put under the right wing. The left wing was removed from the trailer, rotated into position, and its spar root end inserted into the root box in the fuselage. The left trailing edge pin was pushed home and the left main pin was pushed home and its locking tab was engaged. Nobody remembers if the right main pin was pushed further. The control rods were connected through the top hatch with some difficulty. The rudder was found to be unusually stiff, so its posts, pedals and cable guides were lubricated and the rudder worked back and forth, with improved this. The tailplane was installed and secured by its pin. This pin and the control rod connections were double checked. The gap between wings and fuselage were taped as usual.

11:30 am: the pilot and another PSSA member performed preflight inspections, but the main pin locking tabs were not double checked. A positive control check was performed. No issues were found. The glider was removed from its dolly and the trailer was closed.

12:00 pm: all 3 PSSA members took the PW-5 to its tiedown where it was secured from both wingtips and tail to steel cables fixed to the ground. Two wing stands were used.

12:30 pm: all 3 PSSA members went to the club house to have an informal area briefing and fill tow cards and a retrieval card.

01:30 pm: all 3 PSSA members returned to the PW-5, removed tie-downs and stands and pushed the PW-5 across to the staging area at runway 22, where there were no other gliders and a Pawnee towplane was already waiting.

02:00 pm: the pilot boarded the PW-5 and performed the complete preflight checklist, including a release check. His intention was to have a local flight to the north and return to KEPH (around 1 hour, max 10 miles from the airport).

02:10 pm: the pilot gave the signal to hook up and start the flight. The Pawnee towed the PW-5 aloft.

02:15 pm: the pilot released the tow rope normally about 5.5 miles NNW of KEPH at 4200' MSL.

02:25 pm: the pilot was alone around 5.5 miles north of KEPH at around 5000' MSL circling a thermal in a clockwise direction, when suddenly he heard a sharp crack sound. A visual check of the wings didn't reveal any issues, the PW-5 didn't feel any different to fly nor did any controls present any problems, but for safety he headed back immediately anyway, announcing by radio his intention to perform a straight-in landing on runway 22 on the Ephrata CTAF (122.8).

Continues on the next page.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

Making absolutely sure the main pins are fully inserted and their locking tabs are in the correct position before every flight. This should be added as a separate step to the printed preflight checklist kept in the cockpit.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

ADDITIONAL INFORMATION (Additional space for answers to any question.)

Narrative history of flight (continued)

02:30 pm: the pilot landed normally and pushed the PW-5 off the runway as per standard procedure.

02:35 pm: one PSSA member arrived to help and learned of the situation. A visual inspection showed that the left wing gap seal tape was ripped and that the right main pin was in the half way position instead of the correct fully engaged position. They took the glider back to behind its trailer.

03:30 pm: all 3 PSSA members returned to inspect and disassemble the glider. Before disassembly it was noted that the right main pin was not secured and was sitting in around the half way position. The left main pin was fully home and locked. Tape on the right wing was still in place. Tape on the left wing upper surface had broken apart. It was reasoned that the damage (described in the previous page) was caused by the left wing pivoting up on the left pin while unsecured by the right pin, causing its root spar end to press down and damage the fiberglass surfaces previously described.

04:30 pm: all 3 PSSA members finished stowing the PW-5 and all its accessories in the trailer and hooked it up to the tow vehicle.

05:30 pm: the pilot and another member started the drive back to PSSA's home field (WN76) with the trailer in tow.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE.

I understand that the information provided may be subject to public release.
