NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The flight lesson was scheduled at 14:00 and I checked out the plane and preflight as usual. There was one squawk listed on the flight school scheduling website which was about the passenger seat belts being hard to use. The exterior of the plane did not show any squawks or problems during the preflight. All preflight procedures were followed and all preflight checks were done and nothing appeared out of the ordinary. The plane was fueled to 51 gallons of fuel confirmed with the dipstick. The oil level was above 6 quarts as per flight school policy. The flight was a mock commercial checkride. I met with my flight instructor and discussed what the flight was going to consist of, before we proceeded with starting up. We departed RHV 31R right downwind with no issues and proceeded to Anderson and Coyote Reservoir to do commercial maneuvers. After completing all the commercial maneuvers, we proceeded to head to the approach area of the 30 runways of SJC to do 8s on pylons. The base of the charlie shelf was 3000 so we proceeded under it to practice.

Once under the charlie shelf, I picked two points to start the maneuver and position myself facing south east, diagonal of the downwind to start my first turn around the east pylon. I decided that the pivotal altitude to start the maneuver was 1200ft MSL and my flight instructor agreed with the altitude. After doing the first turn around the east pylon, my flight instructor decided to abort the maneuver and try again because I ended below our pivotal altitude. After climbing back to our pivotal altitude, my intentions were to maneuver the aircraft to start at the same position with the same pylons. I was flying the aircraft facing upwind and trying to do a left turn 180 to restart the maneuver. The bird appeared on the right side of the aircraft as I was turning the aircraft to the downwind. As I saw the bird I proceeded to pitch the aircraft down as the bird appeared to be in a climbing left turn. The bird impacted the wing with a loud noise. I did not see the damage of the impact of the bird on the wing. My flight instructor took over the controls immediately.

My flight instructor proceeded to climb the aircraft to 2500 and declared an emergency right away by switching to the norcal frequency 120.1. my flight instructor proceeded to squawk 7700. My flight instructor requested the closest airport from ATC. E16 was the closest airport, so my flight instructor proceeded to fly directly there. ATC proceeded to give us a squawk code, which my flight instructor plugged in. After which my flight instructor asked for the weather and we were given the weather for E16. ATC gave us a phone number to call after we landed which I proceeded to write down. My flight instructor switched to the E16 CTAF frequency and made a call about our intentions to land straight in on runway 14. My flight instructor asked for the awos weather from E16 which I immediately monitored to get the weather. Flaps were added on the final approach and my flight instructor landed on runway 14. As we touched down on the runway the plane swerved left and right. The plane came to a full stop and exited the runway on C. We proceeded to taxi the plane to transient parking, shut down and secured the aircraft.
