Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Left wing and strut bent. Right wing potentially damaged. Rudder damaged. Propeller strike at idle power, all three propeller blades broken. Cowling damage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The purpose of the flight was skills practice and development. Weather was day time and clear with light shifting winds generally from the West. Temp was moderate in the low 20's C. The accident landing was with a light right crosswind. I do not believe that weather was a factor.

I was conducting a landing on a dry lake bed. Touchdown was normal. Initial braking action felt strong but not out of normal. Aircraft control felt normal until the last few moments when the wheels dug into a soft spot on the surface and the aircraft pitched forward striking the propeller and continuing onto its back. Speed at time of pitch over was 10 to 15 kts.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

There were no visual indications that the surface at the landing zone was soft as observed airborne by two experienced pilots. We had conducted a touch and go in a nearby similar area but not the exact location chosen for landing. Perhaps if we had conducted a touch and go on the exact landing location we might have been able to detect the soft subsurface, however, at flying speed we would have likely only skimmed over the upper layer of hard crust not placing enough pressure to feel the subsurface.
