Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Damage to engine gearcase and destroyed propeller. Broken cowling and front windscreen. Bent left main gear and destroyed left side cockpit. Buckling of belly and deformation of rear fuselage before tail.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The morning of June 21 2026 9:00 I arrived at the hanger in which N618SA was held (one half miles east of Kiowa Kansas) with intention of participating in an airport breakfast. Before pulling airplane from the hanger I added 3 gallons of premium automotive fuel into left wing tank. I then proceeded to pull the airplane from the hanger and close hanger door behind aircraft. Upon startup but before initial taxi I made note of wind direction and speed from wind sock on the field to insure safe and proper take off direction. I did not begin my taxi to runway until I observed engine oil and water temperature above 100 degrees Fahrenheit. After taxi to end of runway I continue my preflight checklist which includes verify flight control are free and clear as well as flight instruments are in working order and adjusted properly. Upon take off I release brakes, apply full power, as soon as I am able I lift wheels from grass and climb at indicated airspeed of 50 mph to safe altitude (approximately 1000ft agl) while turning direct to KAVK (destination airport). About 3 miles from KAVK I stay about 1 mile east of town and traffic pattern begins with an extended left base for runway 18. On short final for runway 18 I adjust my approach to land on the grass just east of runway 18 between taxiway Bravo and Taxiway Charlie (as is common practice for other tailwheel aircraft). After successful landing, slowing aircraft down causes tail to settle on tail wheel in which causes very poor forward visibility, I continue on runway heading to intersection of runway 18/36 and runway 9/27 for a left 90 degree turn to enter service road. About 60 feet before entering service road the left main landing gear fell in a deep hole causing immediate prop strike and substantial aircraft damage. After completing shutdown checklist (ignition off, fuel pump off, fuel tank shutoff, electronics off) I unbuckle my seatbelt and exit aircraft through left door which has been greatly damaged.
